

May 13

14:00 – 16:00

Meeting Room 19

**Reconciling adaptation and mitigation in cities: Part II - The application basis:
Mainstreaming into the planning process**

Method(s) used for workshop: brief power point presentations / facilitated group exercises.

Draft Programme

Chair: Terenzi Alberto

Time	Programme
14:00 – 14:15*	Introduction by ICLEI (Julia Peleikis, Alberto Terenzi) – Meaning of and opportunities deriving from integrating mitigation and adaptation.
14:15 – 14:25	Key messages from science: Summary by Richard Dawson on the findings of the morning session
14:25 – 15:40	<p>Group exercise – Building the mitigation/adaptation interface. Participants are divided into groups. Table facilitators welcome participants and explain the exercise.</p> <p>At first, participants are provided with the picture of an ideal-typical city and are requested to brainstorm on and identify hotspots in the city system for interfaces between adaptation and mitigation. Facilitators ask participants to write these on post-its, explaining co-benefits and opportunities.</p> <p>After several “hotspots” are identified, participants discuss these in the group and identify together one mitigation-adaptation goal/action they would like to bring forward.</p> <p>Once a goal/action has been identified, participants will discuss how the process of pursuing that action/goal will be set up. For that, visual support materials will be provided.</p> <p>Leading questions might include:</p> <ul style="list-style-type: none"> - How should the process be set up? - Who needs to be involved from the Local Government administration? - Who should develop the action? - How are the benefits of integrating mitigation-adaptation monitored? Over what timeframes?

	Name of the moderator/facilitator: Alberto Terenzi, Julia Peleikis, Richard Dawson
15.40 – 15.55	Report of the group discussions to the plenary
15.55 – 16:00	Wrap-up of the day and closing of the session
